Data Platform, March 2020

dataflows?

~~(Google) Cloud Dataflow~~

~~TensorFlow Dataflow~~

~~SSIS Data Flows~~

~~Microsoft Flow~~

~~ADFe2~~

~~Mapping Data Flows~~

~~Wrangling Data Flows~~

~~PowerApps dataflows~~

~~Power Platform dataflows~~

Power BI dataflows!

Who?

Who should be using dataflows

- (Financial) Power Users
- Business Analysts
- Tech savvy Users
- Everyone else 😊

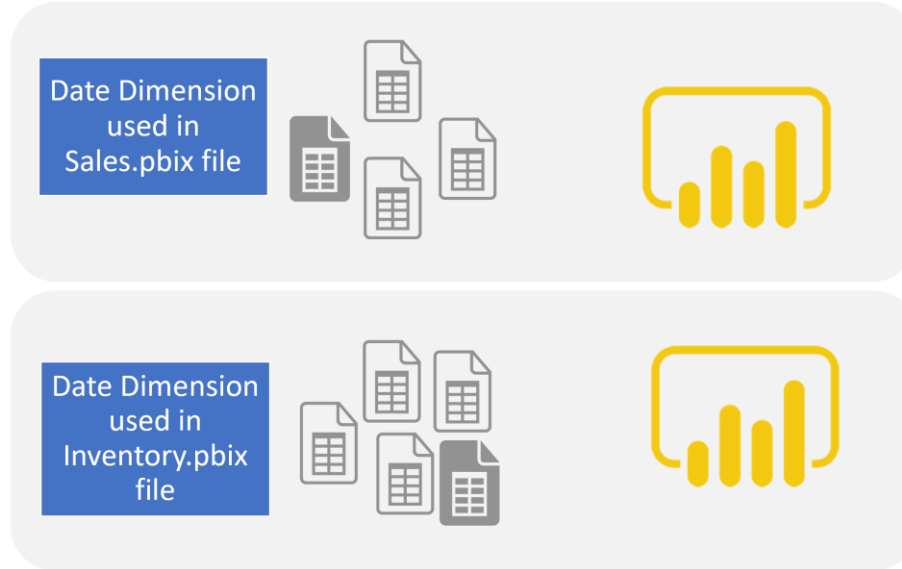

What?

Only Entity, Many Datasets

- Lack of semantic model will create many versions
- Re-use of queries across datasets is limited
- Shared Datasets is all or nothing approach
- Will “Composite Models over Azure Analysis Services and Power BI datasets” change the way we work?

Only Entity, Many Datasets

Date Dimension transformation executed multiple times,
when only once is needed

Only Entity, Many Datasets

Date Dimension transformation executed only once, and then used multiple times

How?

Enter, Power BI Dataflows!

- Preview Late 2018, GA April 2019
- Cloud based PowerQuery experience
- Self-Service Data Preparation
- Non-technical user personas

Enter, Power BI Dataflows

- Build reusable Data Entities
- **Not a replacement for a DWH Solution**
- Manageable and securable like all Power BI Objects
- Managed CDM Folders

Demo – Power BI dataflows

New York Citibikes

- www.citibikenyc.com/system-data
- Public Open Data
- Starts June 2013
- Information about every trip
 - Longer than 60 seconds
 - Starts at public station
- Masterdata

<https://i0.wp.com/thenypost.files.wordpress.com/2013/12/citibike1.jpg?quality=90&strip=all&ssl=1>

How? Common Data Model

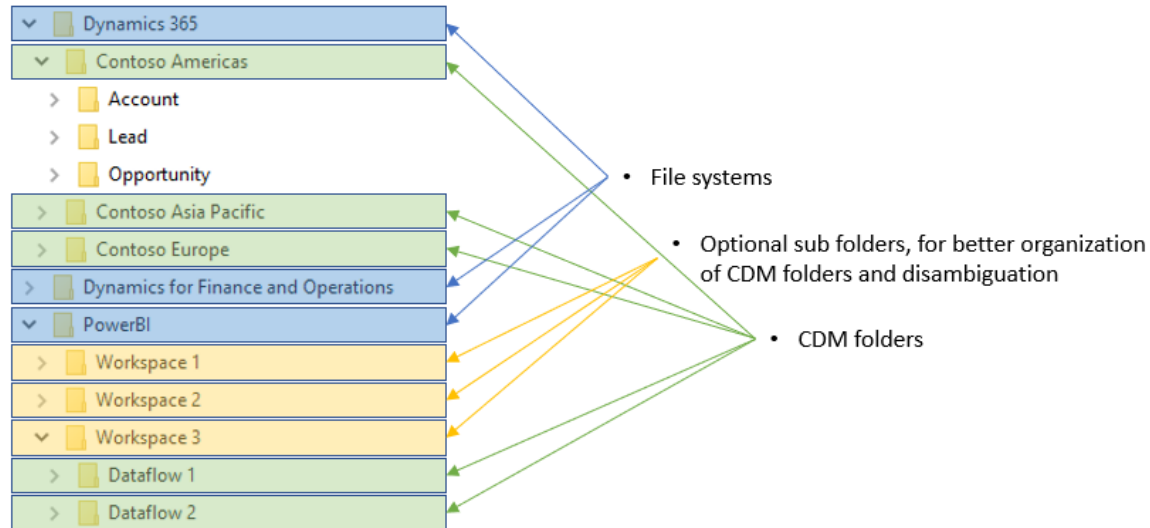

Common Data Model

- Unified metadata layer for Cloud Apps and Services
- Shared
 - Data Language
 - Storage Format and Location
 - Set of Default Entities
- Extend Entities for all consumers
- Simplified integration and disambiguation of data

Common Data Model

Common Data Model

*PASS
SQLSATURDAY

How? Data Refresh

Data Refresh

- Trigger Manual refresh in the UI
- Scheduled refresh comparable to Power BI Datasets
- Refresh History offers an interesting view
- Automatically refreshes any dataflows it is dependent on
- Incremental Refresh is Premium Only (for now?)

Demo - Scheduled Refresh

How? Query Reusage

Query Reusability

- No developer experience in Power BI Desktop
 - Copy/Paste queries between environments
- Linked/Computed Entities (Premium/PPU Only)
 - In-lake Compute, which requires dedicated capacity
 - Can Reference any Entity in any Workspace
 - Data is only stored in the original Entity
- Reference Query, Append or Merge
 - Create a query, and mark 'Disable for load'
 - Reference this query, in the same workspace
 - Logic is reused, and data is duplicated every time the query is referenced

Demo – Query Reusage

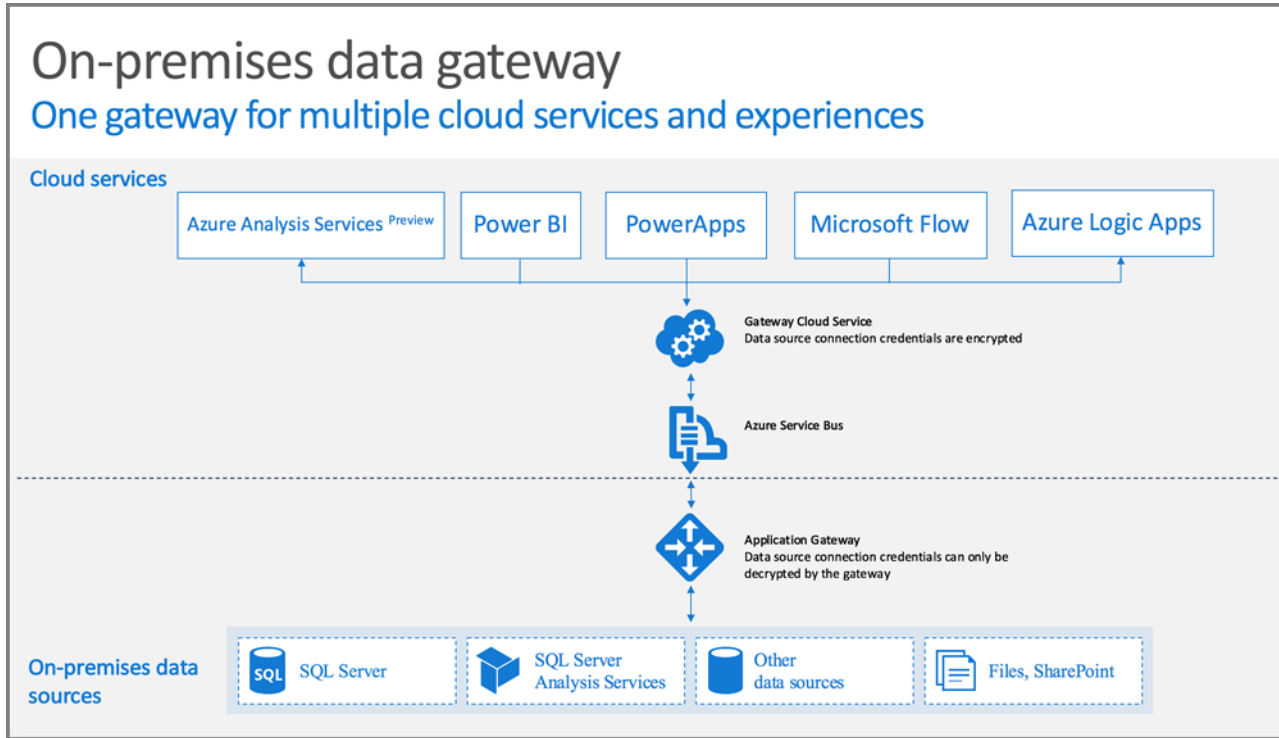

Gateway & Security

On-Premises Datasources

Securing Dataflows

- Dataflows reside in Workspaces
- Secure/Hide Linked Entities by disabling load
- Datasets using Dataflows will likely be Import Mode
 - Security is the responsibility of the dataset designer!

Demo: Gateway & Security

Why?

Where do Dataflows fit in?

- Without dataflows, users might
 - Be blocked on IT involvement
 - Use Excel and manual processes
 - Require 3rd party data preparation tools
- Dataflows are for Power Query users
 - Easy to build reusable data entities
 - Easier to compose and orchestrate
 - Multi-stage, multi-user data prep workflows
 - Dataflows fill a self-service gap in the end-to-end story

Extending Dataflows

Bring your own Storage Account (OLD)

What "done" means:

Workspace Admins can now configure workspace to store its dataflows in ADLS account Global Admin configured

Dataflow CDM folder is stored in ADLS and is accessible by its creator ONLY.

Other people in workspace can get data if they are authorized to the CDM folder outside of Power BI

Now data can be read from CDM Folder via Azure Data Services or LOB solutions that are CDM folder aware

Bring your own Storage Account

Add entities to start creating your dataflow

Define new entities

Choose a data source to define the entities for your dataflow. You can map your data to [standard Common Data Model](#) entities, or define custom entities instead. [Learn more](#)

Add new entities

Link entities from other dataflows

Linking to entities from other dataflows reduces duplication and helps maintain consistency across your organization. [Learn more](#)

Add linked entities

Attach an external CDM folder

Attach a CDM folder from your Azure Data Lake Storage Gen2 account to a new dataflow, so you can use it in Power BI. [Learn more](#)

Create and attach

Attach an external CDM folder to a new dataflow

Name *

Sales Forecasting

Description

Dataflow entities with output from Azure Machine Learning models for detailed sales forecasts.

CDM folder path *

Enter the path to your CDM folder in Azure Data Lake Storage Gen2

Create and attach

Cancel

Add new entities

Add linked entities

Create and attach

BONUS!

Power BI dataflows sort-of-FAQ

- A capability for self-service data preparation in Power BI

- Delivered in a familiar Power Query experience

- Built on the foundation of Azure Data Lake Storage gen2

- Utilize the CDM folder format for data storage

- A tool for business users to drive data reuse without requiring IT involvement

- Enable Excel-like data lineage and orchestration

- NOT a replacement for datasets

- NOT a replacement for a data warehouse

- NOT a replacement for Azure Data Factory or SSIS

- NOT a Premium-only feature

- NOT an additional cost or fee

- NOT spelled with a space or any capital letters

Recap

Why you should use it!

- Business Driven Initiatives
- Fill existing gaps
- Quick prototyping
- Strive for IT handover to operationalize later on
- Configure your own ADLSg2 Storage

The Self-Service BI Hoax

“Products and technology don’t enable Self-Service BI,
people and methodologies do”
