No coffee? No Insights!

Troubleshooting Power BI Report Performance

So you've built a Power BI report with all the shinies? Good!

After some usage, users have reacted that it's a bit sluggish in usage, and they're not keen on using it anymore.

Starting off with the new Performance Analyzer Pane, we'll demonstrate how you can pinpoint bottlenecks in your report, and take actions on these insights.

With the myriad of root causes that are out there, an elimination approach might suit us very well.

Some of the main causes will be explained, and we'll get you going on how you can fix it for yourselves.

This talk will place emphasis on leveraging external free community tools to assess the state of the data model, and go further on fixing the groundworks of your solution.

Attendees should note that is not a DAX Deep Dive class, before wandering in :-)

Troubleshooting Power BI Report Performance

Session Objectives

- Leverage (external) options to pinpoint common causes
- Techniques to avoid, or solve
- Usable set of best practices
- **Not!** a DAX or PowerQuery Performance Deep Dive

Why Troubleshoot Report Performance?

No one likes to wait

But also ..

- “Works on my machine” is not a valid reply
- Context and Baseline are Key
- Aim for quick wins on heavily used reports
- Avoid long investigations on barely used reports (unless it's the CFO)
- 40% Science, 40% Art, 20% Luck
- ***It depends!***

The Tips & Best Practices

6/25/2022
0

The Golden Rule(s)

- Transform early
- Transform once
- Transform smart

Data Types

Auto Date/Time

6/25/2022
0

Column / Row Usage

Modelling

6/25/2022
0

Modelling Tips

STAR SCHEMA

Thanks, @KoVer 😊

Modelling Tips

- 
- Star Schema (all the things!)
 - Use persisted surrogate keys for relationships
 - Avoid Bi-Directional filtering (rather DAX Crossfilter)
 - Disable auto date/time, rather 'Mark as Date Table'
 - Debate Role-playing dimensions
 - Optimize Data Types

Modelling Tips (continued)

- Avoid wide tables
- Remove unused columns **and** rows
- Only load queries that are used
- Reduce inappropriate summarization
- Think about your data granularity
- Hide (or remove) Key fields from the model view
- Consider your source and refresh schedule

Power Query

PowerQuery Tips

- Query Folding, when possible
- Don't repeat tables & fields
- Only load tables that are used in the model
- Specify correct Data Types
- Parameterize 'fact' queries (Date or Entity)

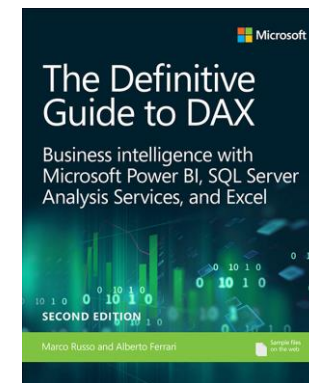

DAX

6/25/2022
0

DAX Tips

- Avoid 'repeater' functions (SumX, AverageX, ..)
- Avoid calculated columns
- Keep measures simple initially, and add complexity incrementally.
- Use variables
- Solve the model, then solve DAX
- Use Data Categories
- Read [the Bible](#) 😊

Reports

6/25/2022
0

Report Page Tips

- Limit visuals on a single pane
- Filtering and slicing before rendering is a valid option (ie. Landing page, Report Filters, ..)
- Avoid having 5+ report tabs on a single report
- Avoid interaction between visuals when they're not needed
- Avoid overly detailed visuals
- Be aware of render intensive visuals (ie. Maps, Custom visuals, ..)

Bonus Round

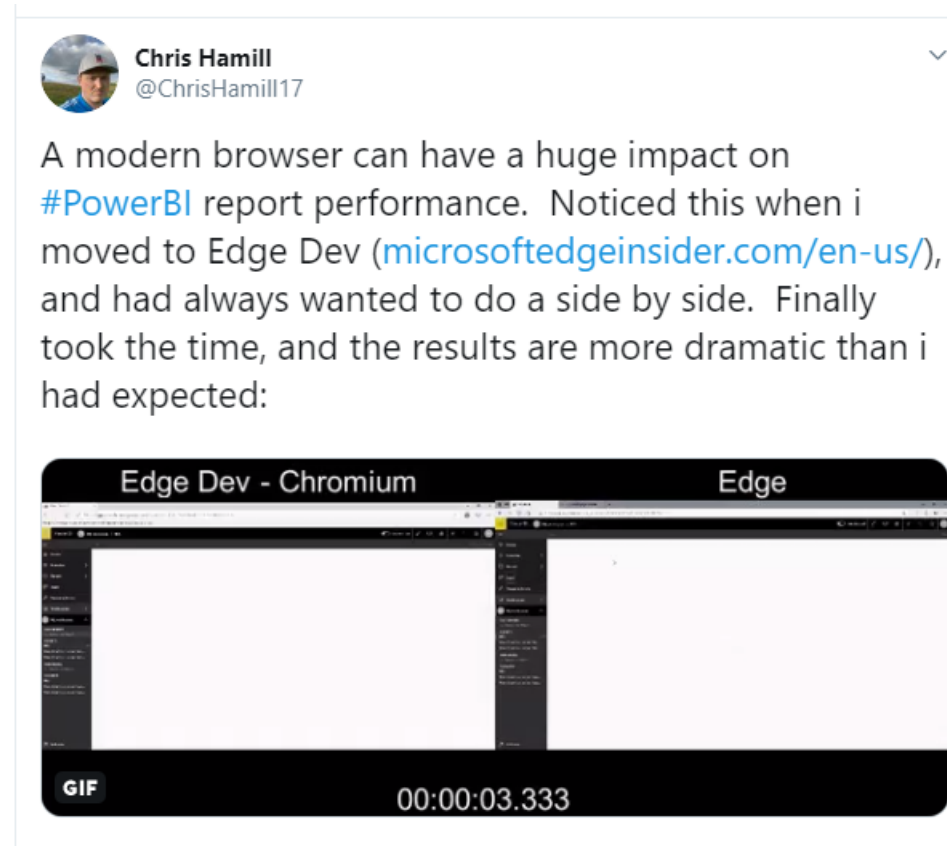

6/25/2022
0

Composite Models & Aggregations

- Composite models (and DirectQuery) require proper usage of DAX
 - Use these wisely
- Aggregations cost memory, data refresh time
 - Solve specific performance issues

Battle of the Browsers

- <https://twitter.com/ChrisHamill17/status/1160242636369694720>

Takeaways

- Report performance should be thought of at design time
- Think about your transforms
- Modelling is key
- Choice of browser and hardware matters
- Create a personal set of best practices for Tabular Editor
- Read public (online) resources
