- #SayNoToPieCharts

Session Objectives

- Set the scene on Power BI Premium
 - Usable set of tips to improve
 - (Hopefully) Convince you auditing is key
 - It's Friday, have a coffee and relax!
-
- **NOT** A roadmap session on Premium Gen2 or PPU Licensing

Power BI Premium?

- Dedicated Capacity Nodes, containing v-cores and Memory
 - P1 (8 v-cores, 25GB RAM)
 - Scales linear to
 - P5 (128 v-cores, 400GB RAM)
- Provides a richer feature set
 - Some features even released Premium First, Pro later (or not ..)
- Support for data residency by region (Multi-Geo)
- Allows for users to access artefacts without a Power BI Subscription
- **NOT** Easy-mode for performance

01

Hold on . .

Power BI Premium Feature Comparison

	Premium	
	Per User	Per Capacity
Model Size Limit	100GB	Up to 400GB
Refresh rate	48/day	48/day
Paginated Reports	✓	✓
AI Capabilities (<u>AutoML</u> , Impact Analysis, Cognitive Services)	✓	✓
Advanced Dataflows Features (Direct Query, etc.)	✓	✓
Usage-based Aggregate Optimization	✓	✓
Application Lifecycle Management (Deployment Pipelines)	✓	✓
XMLA Endpoint Connectivity	✓	✓
Enhanced automatic page refresh	✓	✓
Deployment Pipelines	✓	✓
Multi-Geo Support	✗	✓
Unlimited Distribution	✗	✓
Power BI reports on-premises	✗	✓
Bring Your Own Key	✗	✓

02

Capacity Settings

Capacity Workload Settings

- Check the default capacity workload settings
 - TIP: Don't overcommit the allocated resources
- Are all the workloads needed/used?
- Can we offload some workloads to other capacities?

USER PERMISSIONS

- Capacity admins
- Contributor permissions
Enabled for a subset of the organization

MORE OPTIONS

- Workloads
- Advanced options
- Workspaces assigned to this capacity

Demo : Capacity Settings

03

04

Premium Capacity Metrics App

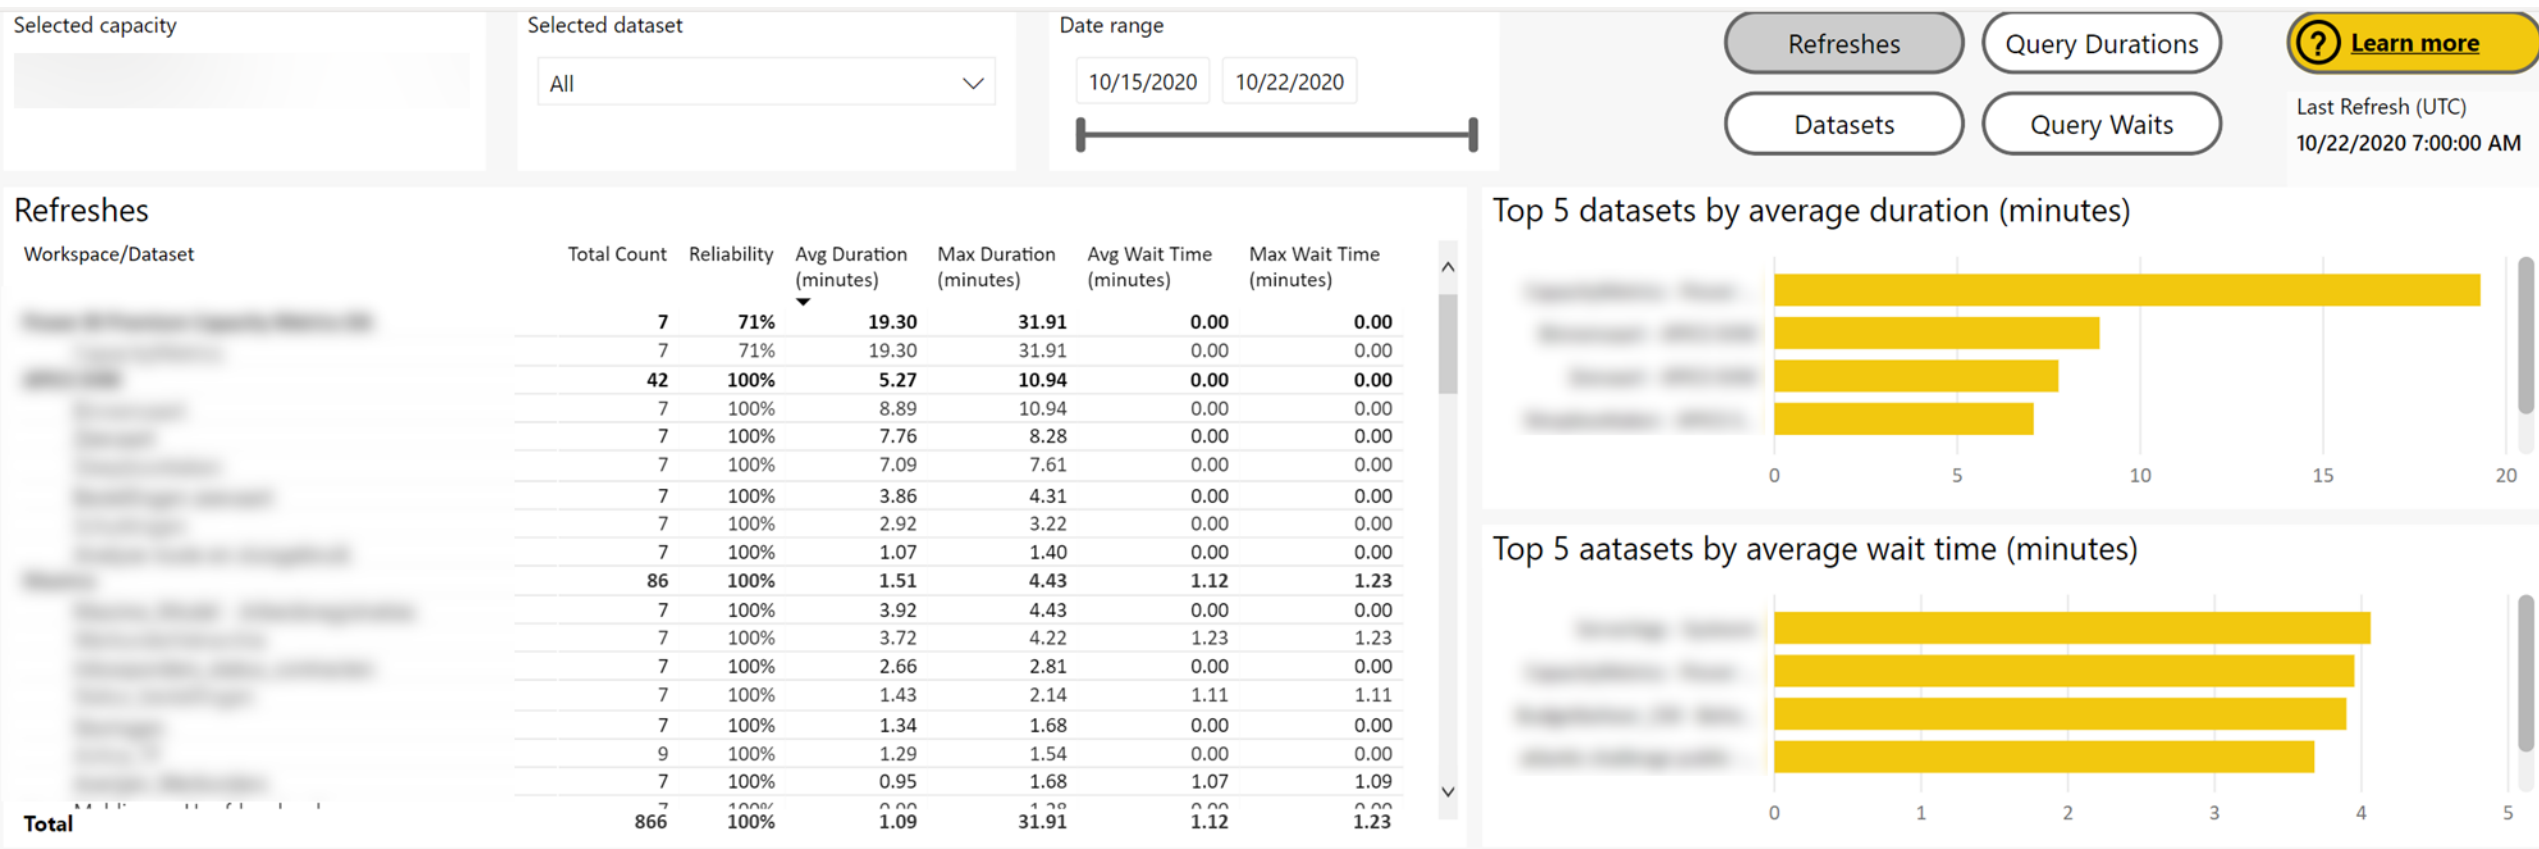

Premium Capacity Metrics App (v2)

- Represents collected metrics for different workloads
- Slice 'n Dice with workspaces, datasets, ..
- Collects 7 days worth of data
- TIP: Set up the template app, and connect to the underlying dataset through XMLA Read/Write
 - Collect and store the data
 - Build up history
 - Build your own report(s) and insights
 - Correlate metrics over longer periods of time

Premium Capacity Metrics App (v2)

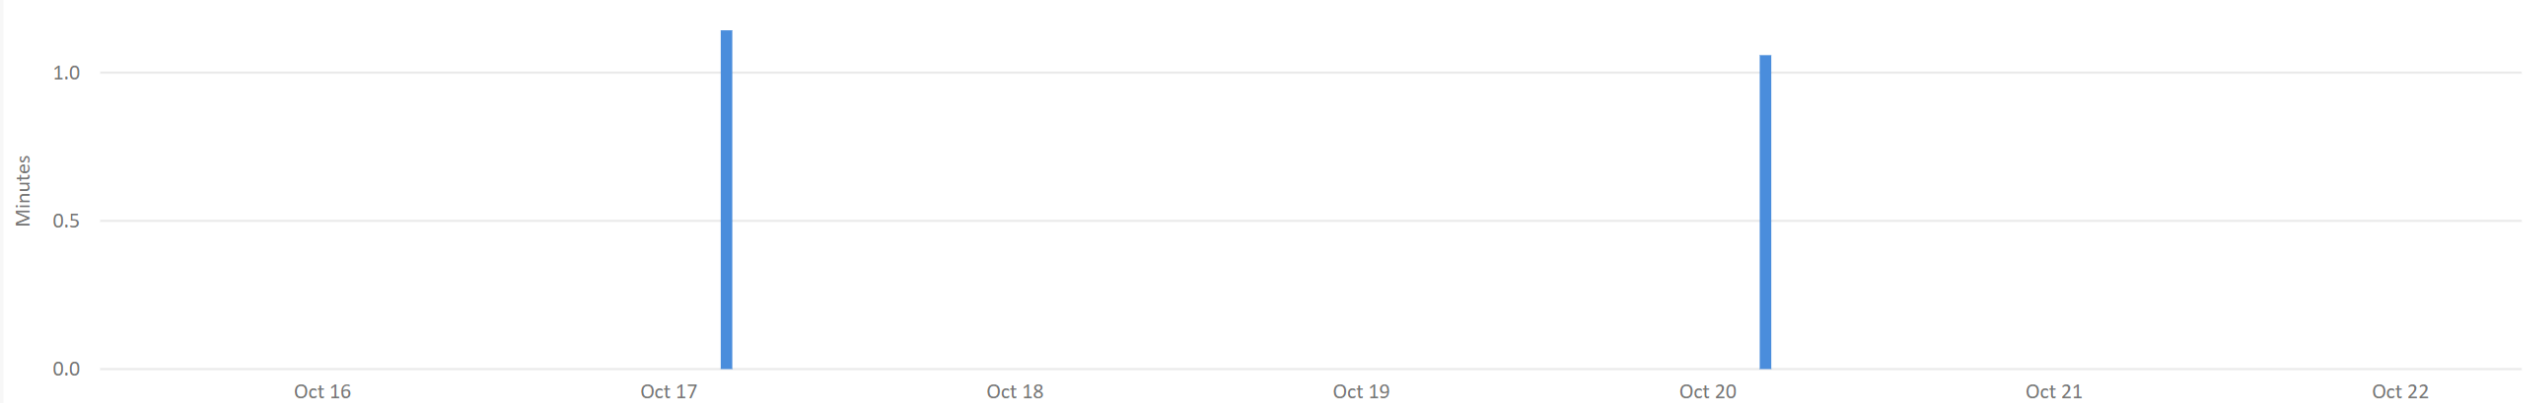

Premium Capacity Metrics App (v2)

Hourly refresh count and memory consumption (GB)

Hourly average refresh wait times (minutes)

Dataset Refreshes

- Dataset refreshes are memory intensive and use $\pm 2x$ RAM
- Scheduled dataset refresh will be queued if there is insufficient memory and all models are active (no evictions possible)
- On-demand refreshes (triggered by a user request or API call) will retry three times, and then fail if there are still not enough resources

Dataset sizes

Workspace/Dataset	Max Size (MB)
	2,267.36
	226.89
	355.57
	2,267.36
	1,056.60
	702.14
	1,493.14
	57.19
	57.19
	728.24
	55.24
	73.57
	116.89
	142.71
	32.62
	64.27
	4.12
	3.16
	29.13
	160.09
	36.47
	231.61
	16.91
	55.52
Total	2,267.36

Dataset eviction counts

Capacity Name	Total
	612
Total	612

High active memory count (over 80%)

Capacity Name	SKU	Count
	P1	0
Total		0

Hourly loaded dataset counts

Hourly dataset evictions and memory consumption

Consumed memory percentages

Memory Evictions

- If the capacity is not experiencing any memory pressure, models are simply loaded into memory and remain there
- When insufficient memory is available to load a model, the Power BI service will first need to free up memory
- The removal of a model from memory is known as an **eviction**

Memory Evictions

- Power BI will first try to detecting models that have become inactive by seeking models which have not been used in the last three minutes
- If there are no inactive models to evict, the Power BI service seeks to evict models loaded for background operations
- A last resort, after 30 seconds of failed attempts, is to fail the interactive operation of the current user

Query durations

Workspace/Dataset

Total Count Average Duration (ms) Max Duration (ms)

	475	80.15	1,418.00
	103	137.70	1,418.00
	372	63.22	1,045.00
	218	43.24	90.00
	218	43.24	90.00
	9,051	31.25	20,536.00
	182	38.58	1,029.00
	81	30.47	355.00

05

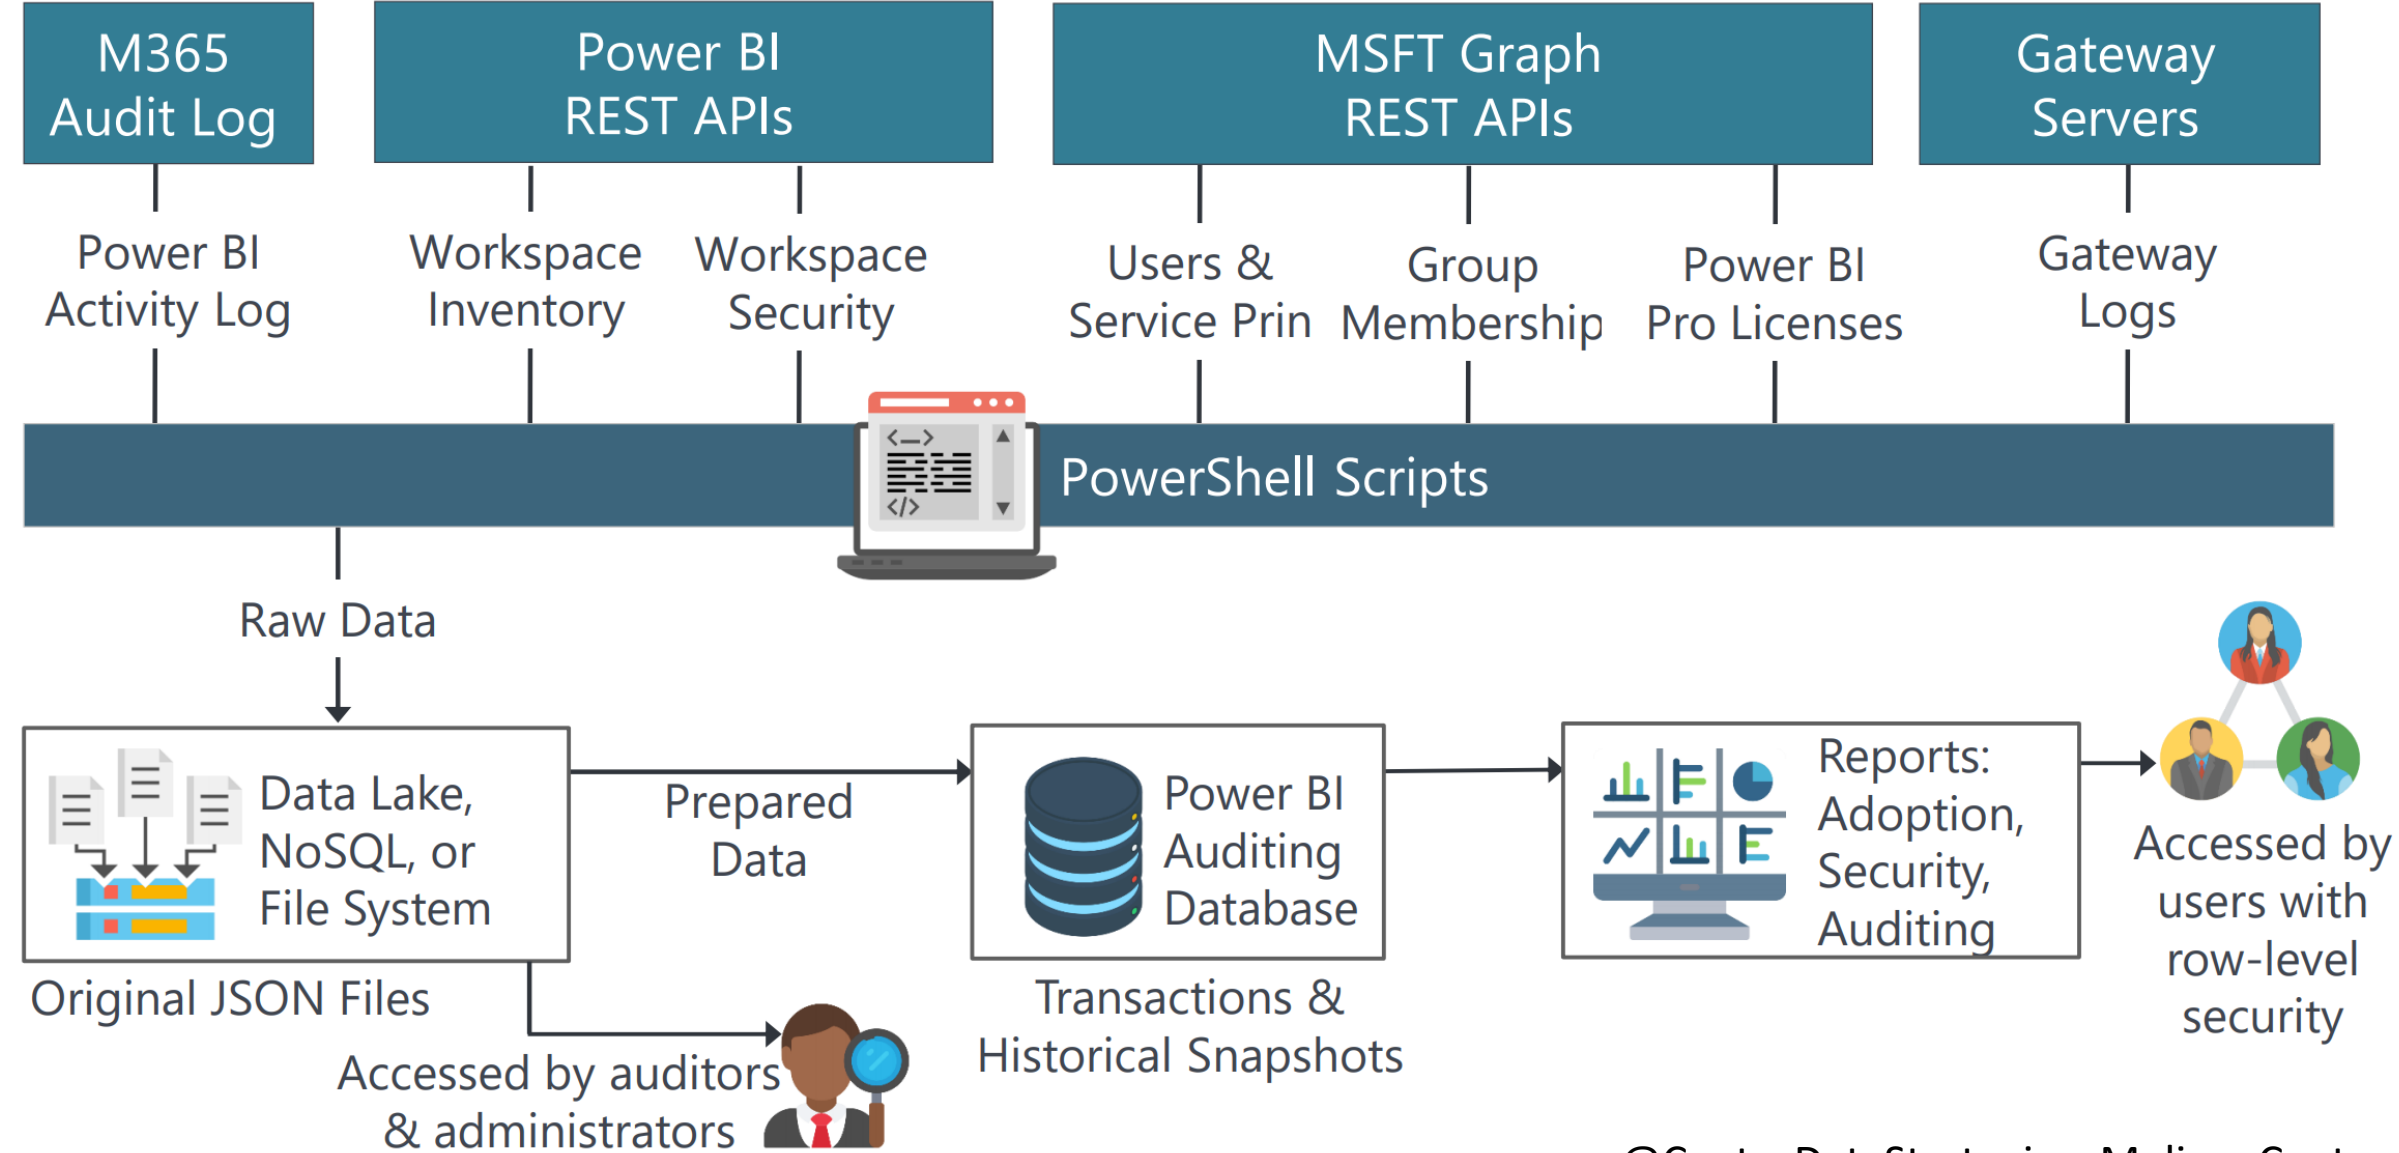

06

What's
going on?

Power BI Auditing

- Extract information about artefacts, usage, user information
- Correlate these for insights into your capacity usage
 - Are users actively using their Pro Subscription?
 - Are we having usage spikes at certain moments?
 - Are we seeing suspicious behaviour that needs to be looked into?

Typical Power BI Auditing Solution

07

It's all
about the
€€€

Power BI Pro Licenses

- TIP : Consumer users don't need Power BI Pro Subscriptions
- User will no longer need a Power BI Pro Subscription when :
 - They are a viewer in an App Workspace (v2)
 - A member of a App Workspace App

Power BI Embedded (A Sku)

- A SKU has close to feature parity
- Billed by the minute to Azure Billing
 - Don't forget to set up Billing Alerts, Policies, and Automation 😊
- TIP: You can spin up A SKU to host certain 'Premium Features' when needed, to reduce usage on the P SKU
 - I.e. Use an A SKU for the 'DEV' and 'ACC' workspace of Deployment Pipelines

08

Where's the
Shinies?

Premium Features

- Paginated Reports
- AI Features
- Power BI dataflows enhanced compute engine
- XMLA Read/Write Endpoint
- Deployment Pipelines
- Large Model Support (up to 4TB in Dataset size)
 - TIP: Gives a performance gain on .pbix files > 1GB
- Export to File API
- ..

09

To conclude

Takeaways

- Premium Gen2 and PPU will be yuuuuge
- Check (and adjust) the Capacity Workload Settings
- Premium Capacity Metrics App v2 is your Ops Base
 - Export data to persisted storage
- Evictions are perfectly normal, don't stress
- Set up auditing to have a complete overview of what's happening
- Activate large model support for models > 1GB
- Offload non-critical workloads to A-SKUs
