

Power BI dataflows?

Why you need to implement it!

Data Platform

#SayNoToPieCharts

dataflows?

dataflows?

(Google) Cloud Dataflow

TensorFlow Dataflow

SSIS Data Flows

Microsoft Flow

ADFv2

Mapping Data Flows

Wrangling Data Flows

PowerApps dataflows

Power Platform dataflows

Power BI dataflows!

Who?

Who should be using dataflows?

(Financial) Power Users

Business Analysts

Tech savvy Users

Everyone else 😊

What?

One Entity, Many Datasets

Lack of semantic model will create many versions

Re-use of queries across datasets is limited

Shared Datasets is all or nothing approach

Will “Composite Models over Azure Analysis Services and Power BI datasets” change the way we work?

One Entity, Many Datasets

Date Dimension
used in
Sales.pbix file

Date Dimension
used in
Inventory.pbix
file

Date Dimension transformation executed multiple times,
when only once is needed

One Entity, Many Datasets

Date Dimension transformation executed only once, and then used multiple times

How?

Enter, Power BI dataflows?

Preview Late 2018, GA April 2019

Cloud based PowerQuery experience

Self-Service Data Preparation

Non-technical user personas

Enter, Power BI dataflows!

Build reusable Data Entities

Not a replacement for a DWH Solution

Manageable and securable like all Power BI Objects

Managed CDM Folders

Power BI dataflows

Demo

Demo: Use Case

www.citibikenyc.com/system-data

Public Open Data

Starts June 2013

Information about every trip

- Longer than 60 seconds
- Starts at public station

Masterdata

<https://i0.wp.com/thenypost.files.wordpress.com/2013/12/citibike1.jpg>

How?

Common Data Model

Common Data Model

Unified metadata layer for Cloud Apps and Services

Shared

- Data Language

- Storage Format and Location

- Set of Default Entities

Extend Entities for all consumers

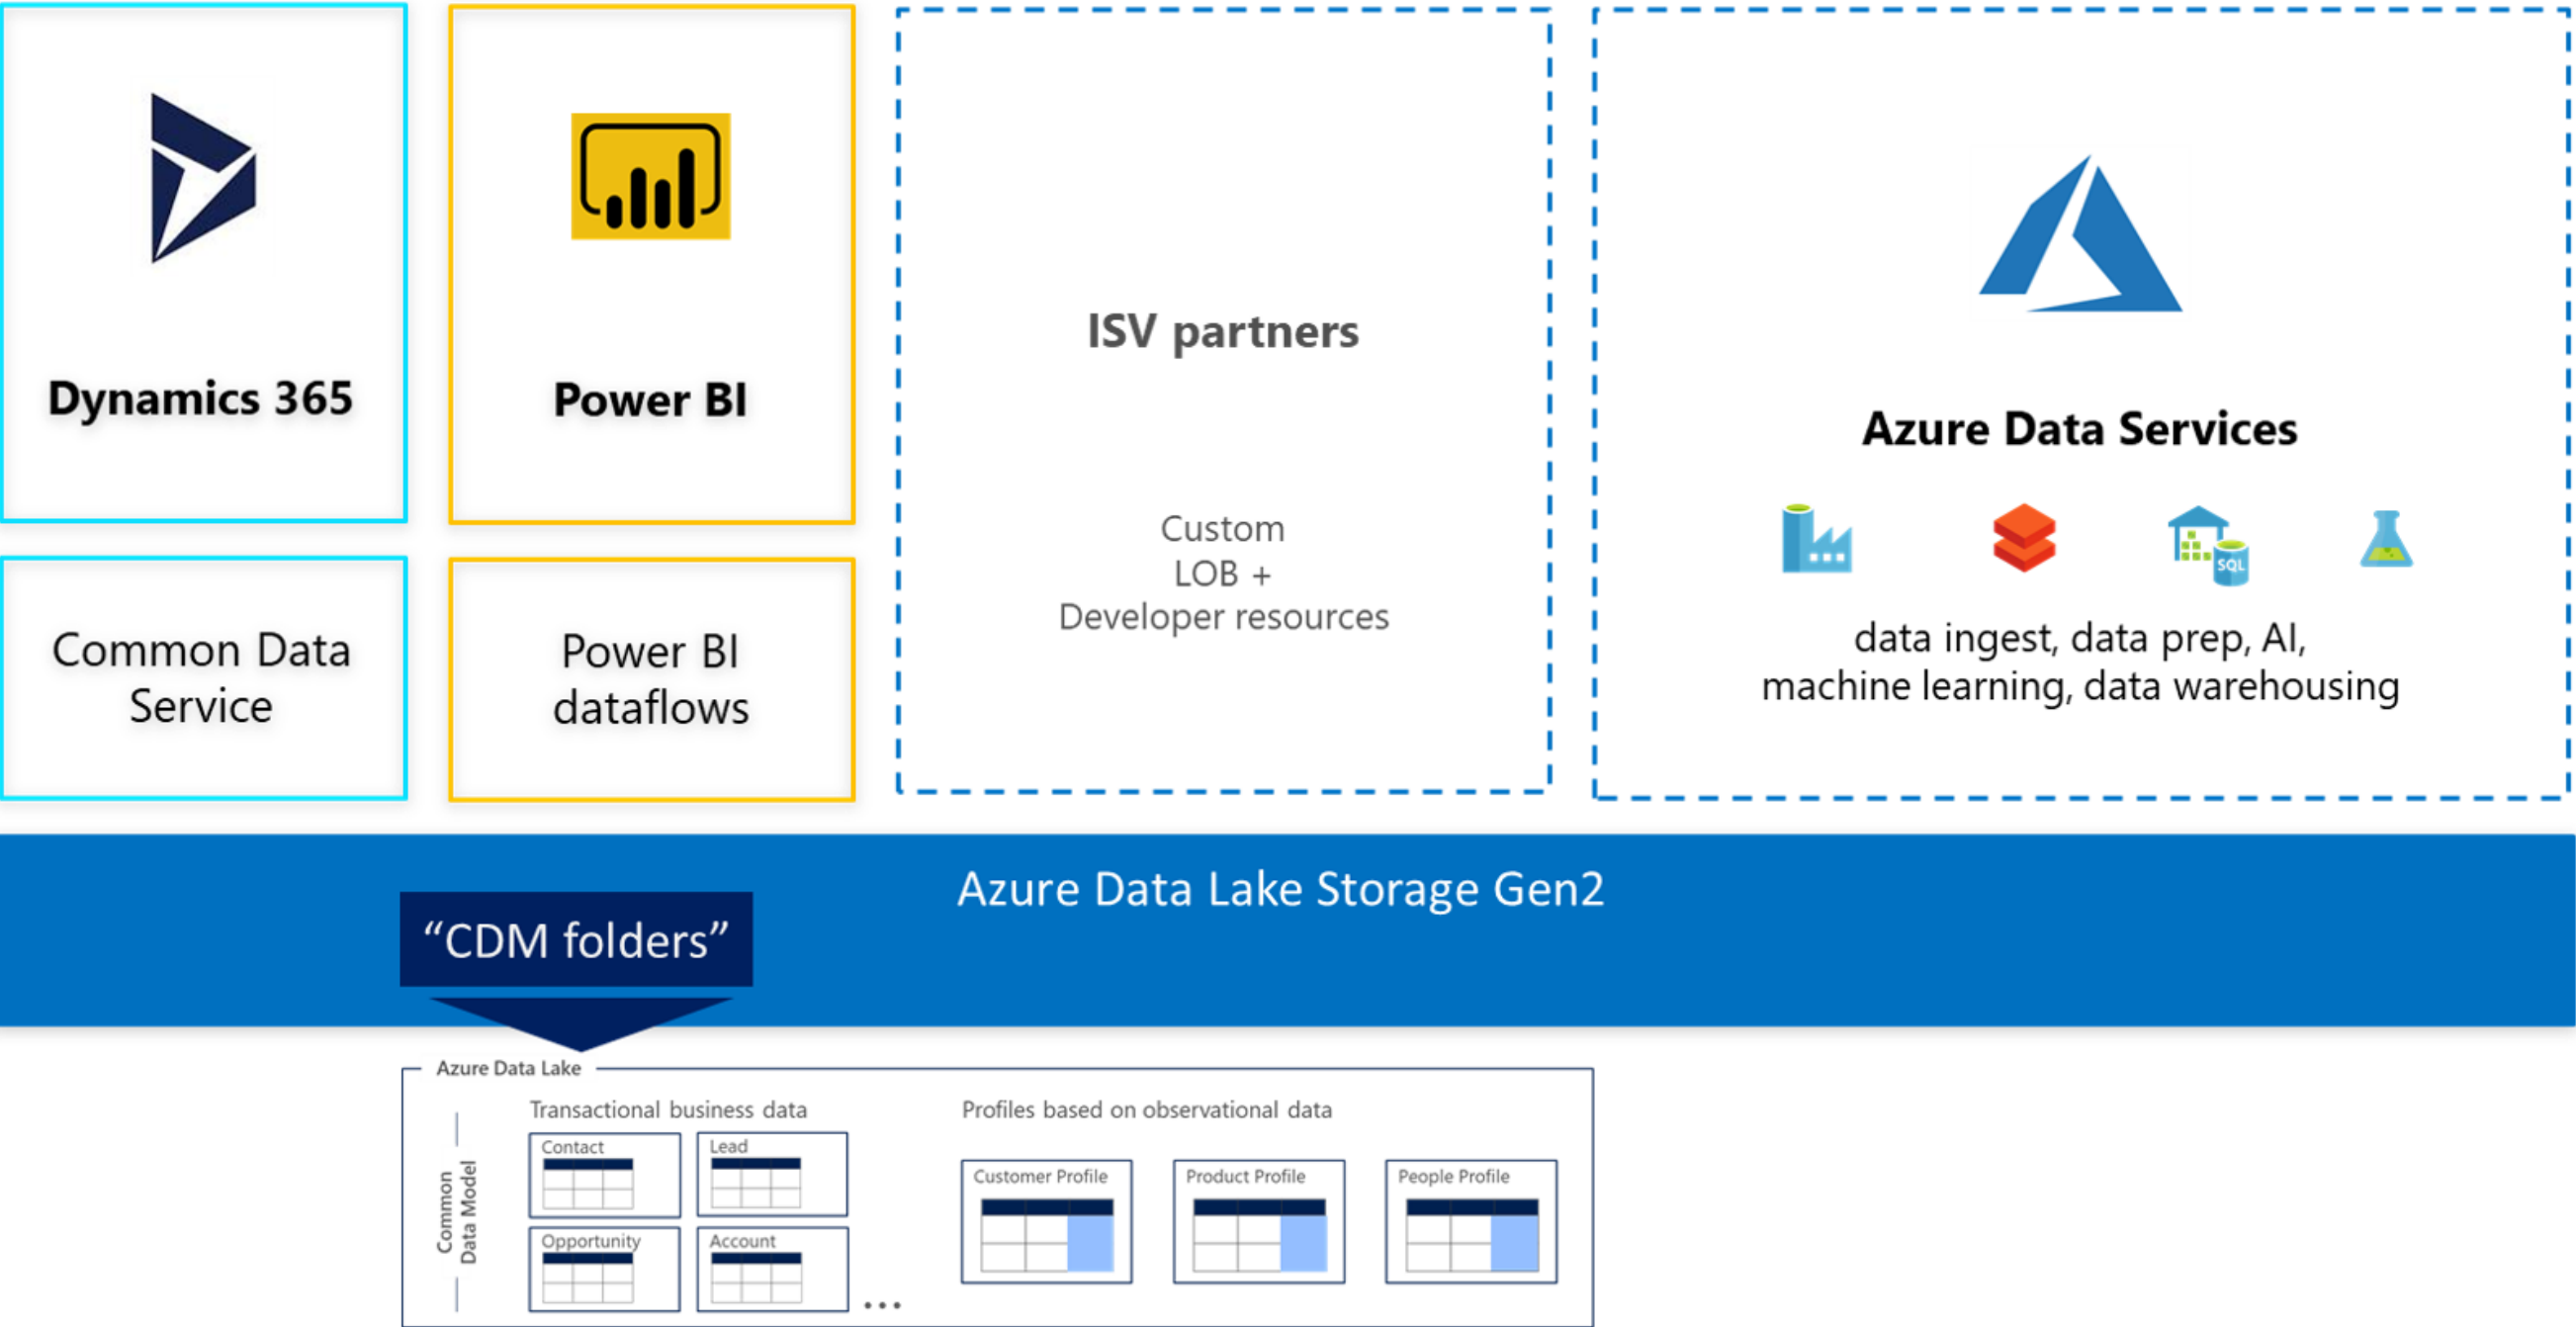

Simplified integration and disambiguation of data

Decision Makers, Business analysts

No code, low code

Data scientists, Data engineers

Low to high code

Common Data Model

Common Data Model

Common Data Model

Demo

How?

Data Refresh

Data Refresh

Trigger Manual refresh in the UI

Scheduled refresh comparable to Power BI Datasets

Refresh History offers an interesting view

Automatically refreshes any dataflows it is dependent on

Incremental Refresh is Premium Only (for now?)

How?

Query Reusage

Query Reusability

No developer experience in Power BI Desktop

Copy/Paste queries between environments

Reference Query, Append or Merge

Create a query, and mark 'Disable for load'

Reference this query, in the same workspace

Logic is reused, and data is duplicated every time the query is referenced

Query Reusability

Linked/Computed Entities (Premium/PPU Only)

- In-lake Compute, which requires dedicated capacity

- Can Reference any Entity in any Workspace

- Data is only stored in the original Entity

Query Reusability

Demo

Gateways & Security

On-premises Datasources

Securing dataflows

Dataflows reside in Workspaces

Secure/Hide Linked Entities by disabling load

Datasets using Dataflows will likely be Import Mode

Security is the responsibility of the dataset designer!

Why?

Where do dataflows fit in?

Without dataflows, users might

- Be blocked on IT involvement

- Use Excel and manual processes

- Require 3rd party data preparation tools

Where do dataflows fit in?

Dataflows are for Power Query users

- Easy to build reusable data entities

- Easier to compose and orchestrate

- Multi-stage, multi-user data prep workflows

- Dataflows fill a self-service gap in the end-to-end story

Extending dataflows

External CDM Folders

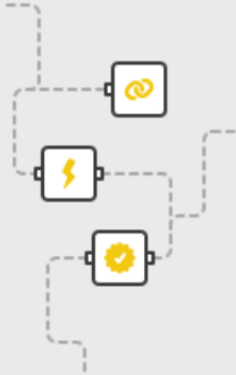

CDM Folders is an open standard

Any tool that can access ADLSg2, and output JSON

Link External CDM Folder in Power BI

Done!

External CDM Folders

Start creating your dataflow

Define new entities

Choose a data source to define the entities for your dataflow. You can map your data to [standard Common Data Model](#) entities, or define custom entities instead.

[Learn more](#)

Add new entities

Link entities from other dataflows

Linking to entities from other dataflows reduces duplication and helps maintain consistency across your organization.

[Learn more](#)

Add linked entities

Import Model

Choose a dataflow model to import into your workspace.

[Learn more](#)

Import model

Attach a Common Data Model folder (preview)

Attach a Common Data Model folder from your Azure Data Lake Storage Gen2 account to a new dataflow, so you can use it in Power BI.

[Learn more](#)

Create and attach

External CDM Folders

The image shows a screenshot of the 'Attach an external CDM folder to a new dataflow' dialog box in Azure Data Studio. The dialog box is centered and has a white background with a light gray border. It contains the following fields and buttons:

- Title:** 'Attach an external CDM folder to a new dataflow'
- Name ***: A text input field containing 'Sales Forecasting'.
- Description**: A text area containing 'Dataflow entities with output from Azure Machine Learning models for detailed sales forecasts.'
- CDM folder path ***: A text input field with a placeholder text 'Enter the path to your CDM folder in Azure Data Lake Storage Gen2'.
- Buttons:** 'Create and attach' and 'Cancel' at the bottom of the dialog box.

In the background, parts of other dialog boxes are visible:

- Define**: A dialog box with the text 'Choose a dataflow to define the data to store in the dataflow. You can also define the data to store in the dataflow by selecting a data model. Learn more'.
- External**: A dialog box with the text 'r from the dataflow. You can also define the data to store in the dataflow by selecting a data model. Learn more'.

At the bottom of the screen, there are three yellow buttons: 'Add new entities', 'Add linked entities', and 'Create and attach'.

External CDM Folders

BONUS!

Power BI dataflows sort-of-FAQ

- ✓ • A capability for self-service data preparation in Power BI
- ✓ • Delivered in a familiar Power Query experience
- ✓ • Built on the foundation of Azure Data Lake Storage gen2
- ✓ • Utilize the CDM folder format for data storage
- ✓ • A tool for business users to drive data reuse without requiring IT involvement
- ✓ • Enable Excel-like data lineage and orchestration

- ✗ • NOT a replacement for datasets
- ✗ • NOT a replacement for a data warehouse
- ✗ • NOT a replacement for Azure Data Factory or SSIS
- ✗ • NOT a Premium-only feature
- ✗ • NOT an additional cost or fee
- ✗ • NOT spelled with a space or any capital letters

Takeaways

Takeaways

Business Driven Initiatives

Fill existing gaps

Quick prototyping

Strive for IT handover to operationalize later on

Configure your own ADLSg2 Storage

The Self-Service BI Hoax

“Products and technology don’t enable Self-Service BI.
People, processes, and methodologies do”
