# Session Objectives

# Session Objectives

Leverage (external) options to pinpoint common causes

Techniques to avoid, or solve

Usable set of best practices

**NOT!** A DAX or PowerQuery Performance Deep Dive

# Why Troubleshoot Reports?

No one likes to wait

## But also ..

“Works on my machine” is not a valid reply

Context and Baseline are Key

Aim for quick wins on heavily used reports

Avoid long investigations on barely used reports (unless it's the CxO)

40% Science, 40% Art, 20% Luck

**It depends!**

Hold on ..

Noisy Neighbours

# PowerBI.com

Shared Resources, blessing and curse

Power BI Premium (Gen 1) does not automagically solve performance issues

Power BI Premium (Gen 2) shows great promise, but is not a one fix for all

Beware of Cache mechanisms

# The Report Case

# Use Case

# Tools for the Trade

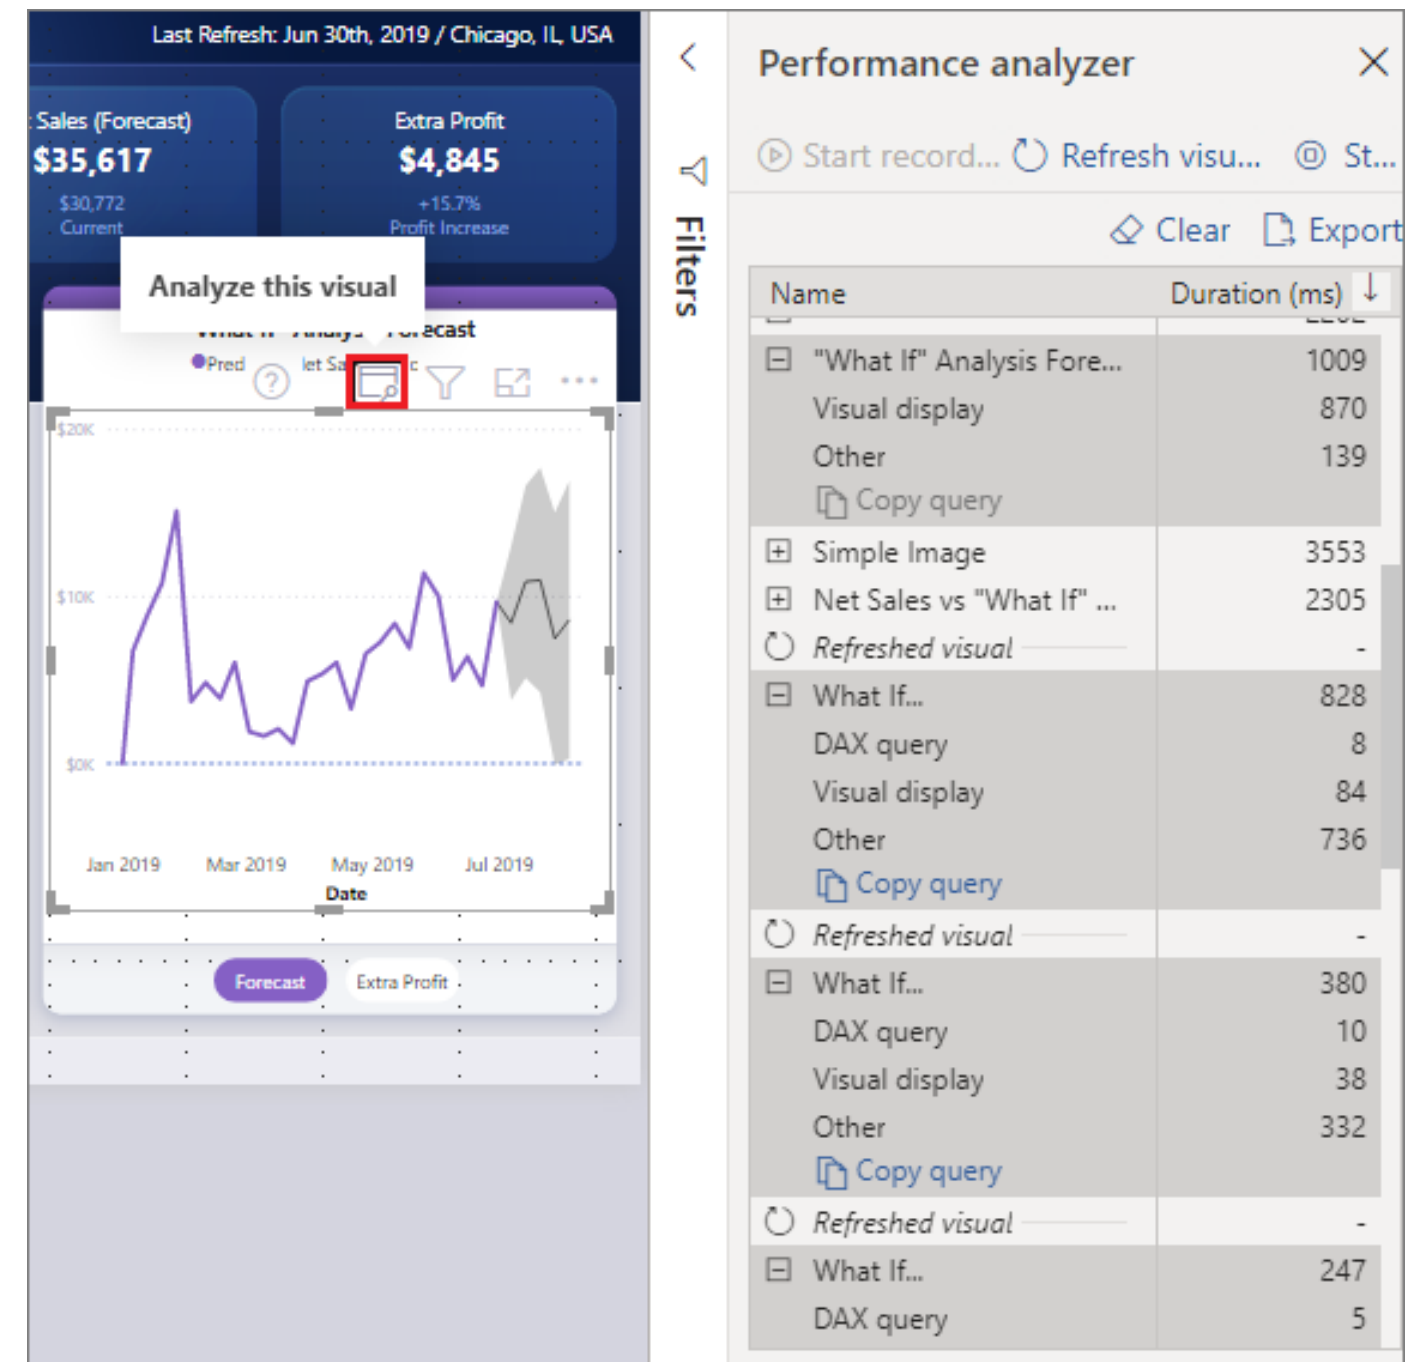

# PowerBI.com

Public Release in May 2019

Flight Recorder for all operations

Breaks down execution times

Export results with ease

<https://docs.microsoft.com/en-us/power-bi/create-reports/media/desktop-performance-analyzer/performance-analyzer-07.png>

# Tools for the Trade

Performance Analyzer Pane

DAX Studio

VertiPaq Analyzer (SQLBI.com)

Tabular Editor

Power BI Helper

ALM Toolkit

Power BI Field Finder

Power BI Sentinel (€)

Power Query Diagnostics Tool

Power BI Sidetools

Power BI Cleaner

And more ..

# The Tips & Best Practices

# The Golden Rule(s)

Transform early

Transform once

Transform smart

# Data Types

# Data Types

Don't underestimate the impact

Do you really need date and time combined?

Think about precision and scale

# Auto Date/Time

# Column/Row Usage

# Data Modelling

# Data Modelling

**STAR SCHEMA**

Thanks, @KoVer ☺

# Modelling Tips

Star Schema (all the things!)

Use persisted surrogate keys for relationships

Avoid Bi-Directional filtering (rather DAX Crossfilter)

Disable auto date/time, rather 'Mark as Date Table'

Debate Role-playing dimensions

Optimize Data Types, Precision, and Scale

# Modelling Tips (Continued)

Avoid wide tables

Remove unused columns **and** rows

Only load queries that are used

Reduce inappropriate summarization

Think about your data granularity

Hide (or remove) Key fields from the model view

Consider your source and refresh schedule

# Reports

# Modelling Tips (Continued)

Limit visuals on a single pane

Filtering and slicing before rendering is a valid option (ie. Landing page, Report Filters, ..)

Avoid having 5+ report tabs on a single report

Avoid interaction between visuals when they're not needed

Avoid overly detailed visuals

Be aware of render intensive visuals (ie. Maps, Custom visuals, ..)

# Power Query

# Power Query Tips

Query Folding, when possible

Don't repeat tables & fields

Only load tables that are used in the model

Specify correct Data Types

Parameterize 'fact' queries (by Date or Entity)

DAX

# DAX Tips

- Use 'repeater' functions (SumX, AverageX, ..) when needed
- Avoid calculated columns
- Keep measures simple initially, add complexity later
- Use variables
- Solve the model, then solve DAX
- Read [the Bible](#) 😊

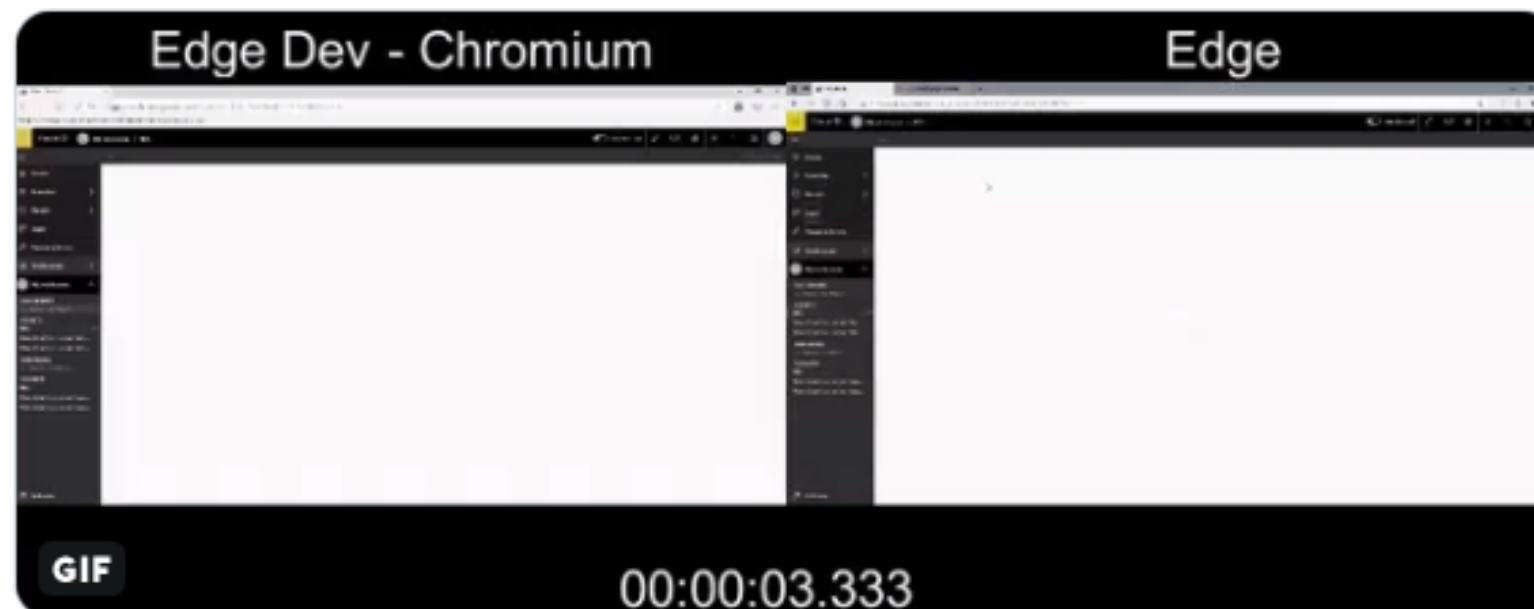

# Battle of the Browsers

Chris Hamill  
@ChrisHamill17

A modern browser can have a huge impact on [#PowerBI](#) report performance. Noticed this when i moved to Edge Dev ([microsoftedgeinsider.com/en-us/](https://microsoftedgeinsider.com/en-us/)), and had always wanted to do a side by side. Finally took the time, and the results are more dramatic than i had expected:

<https://twitter.com/ChrisHamill17/status/1160242636369694720>

# Wrap Up

# Takeaways

Report performance should be thought of at design time

Think about your transforms

Modelling is key

Choice of browser and hardware matters

Create a personal set of best practices for Tabular Editor

Read public (online) resources
